

### The Ventipack has a lot of applications

The Ventipack is a product that can be used for packaging pallets and trolleys (or carts) on which goods are transported. It is ideal for transporting perishable goods such as flowers, plants and fresh fruit and vegetables, because it is permeable to air.

### The Ventipack 'breathes'

The Ventipack is made of woven gauze with innumerable tiny holes. Because of this, the fabric 'breathes' and surplus moisture is rapidly able to evaporate and disappear. Thanks to this property of the fabric, the products in your pallet or trolley rapidly take on ambient temperatures and condensation is prevented. You economise on your heating or cooling costs and the product arrives at your clients' premises in optimum condition. The graph below shows the difference between a trolley wrapped in plastic film and a trolley in a Ventipack. The trolleys were pushed into a cold store at a temperature of 3°C at the same time. The temperature of the trolley in a Ventipack dropped to 8°C within three minutes whereas the trolley wrapped in film took more than ten minutes to do so. The trolley with a Ventipack reached the ambient temperature of 3°C after 25 minutes and the trolley wrapped in film had not yet done so even after a few hours.

**PACK** smart packaging

## The Ventipack is elastic

The woven gauze of the Ventipack is slightly elastic and is closed by means of a zip. The zip has elastic tapes on both sides which enable it to close perfectly around the pallet or trolley.

At places where products stick out of the pallet or trolley, the Ventipack stretches with them, thus preventing damage to the products concerned. Ventipacks are available for pallets, for the Danish trolley and for the Flora Holland stacking trolley, but can also be made to your specifications.

## The Ventipack is resistant to wear, making it durable and environmentally friendly

The fabric used in the Ventipack has a soft, non-static coating, which does not adhere to or scrape against the product, handlers, etc. Because of this coating, the polyester threads in the fabric cannot shift, so that the fabric is very strong. You can cut a Ventipack with a knife or scissors without the fabric tearing.

Ventipacks are so strong and resistant to wear that you can use them for at least 150 transports and it is not unusual for them to be used 500 times. This means that you recover your investment very quickly. Mountains of plastic film waste (see photo) are a real eyesore for you and your customers. Furthermore, plastic is detrimental to the environment, takes up a lot of room and its disposal costs money. Your customers will, therefore, be pleased if your products are delivered in a Ventipack.

## The Ventipack is fast, professional and saves costs

You hang the Ventipack up on the corners of your trolley and only have to walk around it once. Then you zip up the fabric in a jiffy. The elasticity ensures that the exceedingly strong zip closes smoothly and that the fabric stays in place. The convenience and long life of the Ventipack yield savings with regard to your packaging and labour costs and reduce your transport losses. Moreover, the Ventipack gives your products a professional appearance. It is even possible to have your logo printed on the fabric. This is very handy in that group transporters can see from a distance that the pallets or trolleys in question are yours. What is more, the Ventipack has a practical document pouch in which you can place the relevant documentation so that it is neatly stored and clearly visible. Consequently, documents have a regular place and no longer get lost.
