

# Easy Ice Clean

## Cleaning method for reflectors and lamps

The Easy Ice Clean is a machine that cleans lamps and reflector hoods fast, cheap and effectively.

### Easy

Cleaning of the reflector hoods can be done at any time, even when the crop is still in the greenhouse. Dismantling and reassembly during cleaning is not necessary and electrical installations can be used immediately after cleaning with Easy Ice Clean.

### Ice

The machine can move itself on the existing pipe rail system.

Easy Ice Clean works with dry ice (CO2 recycled), no moisture (water) is used in the process, only CO2. Dry ice contains disinfecting, bacteriostatic and bactericidal properties.

### Clean

The dry ice disinfects and makes contamination as a result of dismantling a thing of the past. The ultraclean results are fully approved by the HACCP hygiene protocol.

### Profit

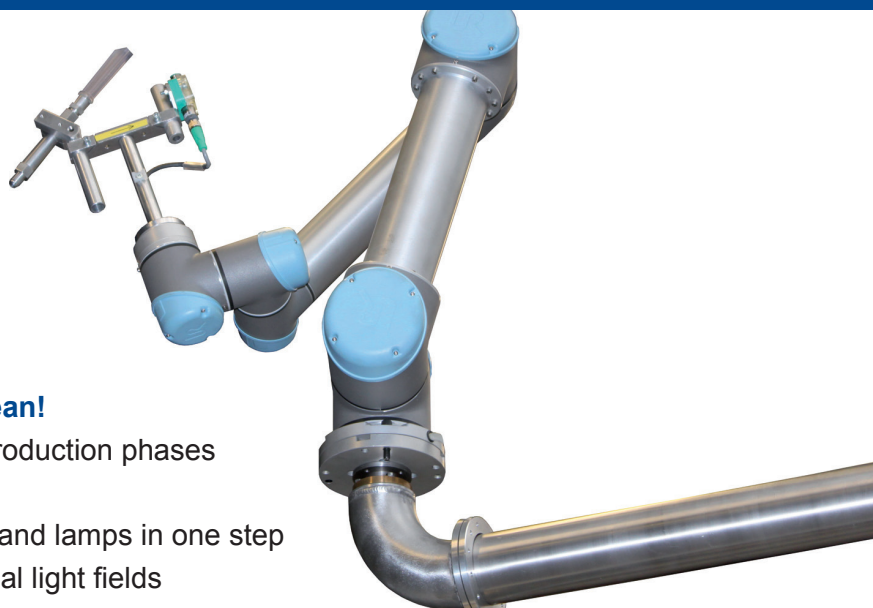

Easy Ice Clean saves on time and labour costs. In addition, clean reflector hoods and lamps give off more light. This has a positive effect on the crop and enables a better growth.

# Easy Ice Clean

## Easy Ice Clean: easy, quick and ultra-clean!

- Suitable for use in all production phases
- Dry cleaning method
- Cleans reflector hoods and lamps in one step
- Option to clean individual light fields
- Cleans reflector hoods of any size or shape
- Optimisation of energy efficiency
- Ultra-clean finish
- \*Approved internationally by EPA, FDA and USDA
- Production capacity 750-1000 reflectors per day
- Use of robot technology ensures a 100% constant ultra-clean result

### Easy Ice Clean in short

- No dismantling or reassembly
- Limits damage to reflector hoods and lamps
- No contamination through brushes
- Cleaning on basis of dry ice CO<sub>2</sub>
