

METO TRANSPORTATION CART

The Meto Transportation cart is especially designed for Meto spray unit path to path movement. Use our transportation cart in combination with the Meto spray robot and there is no need to be present in the greenhouse. Spraying of crops can, namely, be executed in an automatic capacity.

The Berg Hortimotive Meto transportation cart is expressly designed for the purpose of Meto spray unit movement.

The operation of the computer controlled Meto Transportation cart is very easily. The operation panel, identical to the Meto spray trolley, is compact, has an organised lay-out and is provided with touch controls. Various requirements can be entered via a dialogue-programming feature. It offers, for example, a path skip option.

The Meto Transportation cart navigates the walkway, shifting the Meto spray unit from path to path.

The Meto transportation cart is guided by a slide way constructed in the walkway. A hose reel unit is installed onto the Meto Transportation cart, connectable to a high-pressure supply line or spray tank unit. The hose will automatically roll and unroll while moving the Cart.

The cart may be equipped with a malfunctioning detector attachable to your alarm or beeper, informing you by text message at your cell phone of operation circumstances on your absence from the greenhouse, if required.

Purchase of this machine is a considerable labour saving tactic, and simultaneously allows unpleasant tasks to be taken care of.

Future regulations may forbid the presence of personnel in the greenhouse while spraying is in progress.

An additional option is a computer link-up to the sickness and plagues registry.

INNOVATORS IN MOTION

Technical specifications:	
Length cm. :	180
Width cm. :	140
Height incl. Reel cm. :	225
Traction batteries :	24V/110AH
Motor capacity Kw.:	0.37
Reel mtr.:	100/ ½ "
Weight kg:	450

Options:

- Malfunctioning detector in combination with beeper.
- Guide system at the start of the pipe rail system.
- Guiding via slide way in concrete walkway.
- Wide reeling drum, for long hose lengths (>100mtr).

Application:

Automatic movement of Meto spray robot from path to path.

Advantages Meto Transportation cart:

- Improved labour conditions.
- Labour saving.
- Fully automatic spraying.
- No need to be present during spraying.
- Meto Transportation cart stops in the loss of water pressure.
- Easy to use.
- Suitable for intensive use.
- High reliability factor proven through years of experience.
