

CLEANER TO REMOVE ECLIPSE LD, TRANSPAR, OPTIFUSE AND OPTIFUSE IR

-  **Easy to apply**
-  **Dilute with clean water**
-  **Apply under dry circumstances**
-  **Applicable to all types of greenhouses**

WHAT

Topclear is the cleaner to remove the Sudlac coatings Eclipse® LD, Transpar®, Optifuse® and Optifuse® IR. By using Topclear a grower has full control over when the coating is to be removed.

WHY

To control the light level in your greenhouse, coatings are applied in spring. This creates an optimal light level for your crop. When natural light is decreasing in autumn, all available light is needed for your crop growth. Cleaning with Topclear results in a clean greenhouse roof for maximum light transmission.

USAGE

Mix Topclear with the necessary amount of clean water. Apply the solution evenly onto a dry greenhouse surface under dry weather conditions and a minimum temperature of 5°C (40°F). Minimal reaction time is 20 minutes before rinsing with water or brushing. Considerable rainfall will wash away the coating. Only apply Topclear if considerable rainfall is expected in the next few days. Removal with roof sprinklers is not recommended.

For removal of Optifuse and Optifuse IR: Apply Topclear in the advised amount and dilution within 3 days before considerable rainfall. A brushing machine should be available in case the cleaning result is not satisfactory.

For detailed instructions about how to apply and dilution www.sudlac.com

Application	Amount of Topclear		Amount of water		Total amount of spraying liquid	
	Cans per hectare	Cans per acre	Liter per ha	US gal per acre	Liter per ha	US gal per acre
