

Growblock®

Recyclable and environmentally friendly, the Growblock works perfectly in combination with the Jiffy Growbag or as a stand alone item. The Growblock offers a consistent substrate crop after crop with a favorable air water ratio and has a proven record in hydroponic systems.

Growbag

Available in different sizes, with or without pre-cut plant and drainage holes, the Growbag offers three alternatives in regards to substrate; the HC containing 100% husk chips for crops that perform best in an airy substrate, the High Yield, a double layered 50% husk and 50% coco pith as well as the Jiffy blend of 50% husk and 50% coco pith suitable for crops watered intensively without drowning the root zone.

It's all about the roots

Vertical farming is taking off as a new way of producing food globally. With this concept, food is produced locally on vertically stacked layers in a warehouse type building or integrated in other urban structures. Vertical farming makes it possible to control all environmental inputs which cannot be done if crops are grown in the field. Because the crops grow vertically stacked on top of each other, vertical farming makes use of artificial lighting, environmental control of humidity and temperature, as well as a controlled fertilizer system to keep conditions optimal for the best possible plant growth at all times.

Urban farming (i.e greenhouses on city rooftops) and Hydroponic systems have been around for sometime now and are closely related to vertical farming, as Jiffy has a long history with hydroponic systems, our products are ideally suited for the vertical farm.

This brochure introduces the Vertical Farmer to our products suited for these type of farms.

Preforma®

Preforma has a proven track record for use in hydroponic systems its the ultimate in flexibility, customer made to grower specs. Fits all automated systems and is available in any size or type of plug tray. Preforma reduces shrink in vertical farming systems as well as during shipping.

Jiffy-7C®

Jiffy-7®

This labor saving 'container and media in one', secures no transplant shock, is cost effective, and is available in many sizes and tray configurations. For vertical farming systems the poly-roll system offers unlimited possibilities. Jiffy-7's 'open wall' concept promotes healthy root development.

Jiffypot®

Environmentally friendly alternative to plastic pots, the Jiffypot is well suited for automation and promotes healthy root systems and thus healthier crops in vertical farming systems. Jiffypot is 100% biodegradable, Certified Home Compostable (Vincotte) and OMRI listed.
